Watchdog

[Datasheet](#)

Cudy PoE switches connect and power various network devices seamlessly and efficiently. PoE Switches simplify network infrastructure by combining power and data into a single cable, eliminating additional power outlets and wiring.

Watchdog for Improved Reliability

The PoE Watchdog monitors link activity on port 1~4 and attempts to reboot connected clients that have been inactive for 5 minutes, ensuring system stability. Do not turn it on for clients with online auto-upgrade feature.

Extend for Long-Range Powering

Prolongs the PoE transmission distance of ports 1-4 to a maximum of 250 m, enabling long-range surveillance installations.

VLAN Mode for Port Isolation

Separates clients into different subnets for improved security, preventing data leakage in case of client-side hacking.
